Application/Control Number: 10/782,986

Art Unit: 3723

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7, 9-10, and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Edson.

In Edson 16,17 are first and second lever arms, 20,21 are first and second means for contacting a cylindrical shaft shaped element, and 14 is a pivot. Statements of intended use such as the type of cylindrical shaft shaped element that is being gripped is a matter of intended use that has no patentable significance. In any case, the Edson device is considered to be capable of performing the recited intended use since the type of tubular member being gripped by Edson is available in a wide range of sizes and the gripping member is commensurate with the size of the tubular member being gripped.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 8 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Edson.

The length of the lever arms and the length of the tubular gripping portion is no more than an obvious matter of design choice absent a showing of criticality for this

feature. One of ordinary skill in the art would have been motivated to select a suitable length of lever arm for the obvious purpose of achieving a mechanical advantage and making the gripping easier. One of ordinary skill in the art would have been motivated to select a length of gripping member for the obvious purpose of achieving stability during the gripping process.

Claims 11 and 14 –19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Edson in view of Chiu.

Chiu teaches that the pivot for a pair of lever arms may include a forked portion.

To provide a forked portion for the pivot for the pair of lever arms in Edson would have been obvious for one skilled in the art at the time the invention was made in view of the disclosure of Chiu. One of ordinary skill in the art would have been motivated to do this in order to provide a convenient manufacturing expedient to eliminate the need for an extenal hinge member. The length of the lever arms and the length of the tubular gripping portion is no more than an obvious matter of design choice absent a showing of criticality for this feature. One of ordinary skill in the art would have been motivated to select a suitable length of lever arm for the obvious purpose of achieving a mechanical advantage and making the gripping easier. One of ordinary skill in the art would have been motivated to select a length of gripping member for the obvious purpose of achieving stability during the gripping process.

Claim 20 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/27/04.

Art Unit: 3723

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert C. Watson whose telephone number is 703 308-1747. The examiner can normally be reached on Mon. - Thurs., 5:30am - 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph J. Hail III can be reached on 703 308-2687. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
